Total Transaction Amount by Status & Device

	Android	iOS	NULL	Web
Completed	100.00%			
Declined	1.25%	98.75%		
Pending	100.00%			
Reversed				100.00%
Total	2.35%	2.87%	23.02%	71.76%

Transaction Type vs Fees Charged - Fees Leakage

Transaction Type	Total Typical Fee	Total Fee Charged	Fee Leakage	Fee Leakage %
Transfer - International	£500.00	£100.39	£399.61	68.06%
ATM Withdrawal	£112.50	£0.00	£112.50	19.16%
Crypto Purchase	£75.00	£0.00	£75.00	12.77%
Total	£687.50	£100.39	£587.11	100.00%

- #### Revenue & Fee Health
- Transfer-International Undercharged on 100% of Transactions, Creating £399.61 Revenue Leakage
 - Transfer-Outbound Generates Highest Fees (£149.59), but Most Charges Are Erroneous
 - £1,174.39 Hidden Revenue Leakage Despite Balanced Fee Revenue
 - Business Segment Contributes 40% of Fees from Just 9% of Transaction Value

- #### Fraud & Risk Exposure
- Fraud Rate Reaches 20%, with Fuel Transactions Showing Highest Risk (31.33%)
 - 100% of Fraud Occurs Among KYC-Verified Customers
 - Customer 20 Represents 59% of Book Value & 95% of Fraud Exposure
 - Gambling Transactions Drive Elevated Fraud Risk, Crypto Does Not

- #### Transaction & Channel Patterns
- No Channel Emerges as a Risk Driver Despite a 35% Declined Rate
 - Business Segment Records Zero Android Usage Across All Transactions
 - Device Type, Not Channel, Explains Transaction Outcomes

- Freeze and investigate Customer 20.
- Review transaction settlement process.
- Correct Transfer-International fee rules.
- Increase monitoring on Fuel and Gambling sectors.

Total Transaction Amount by Channel & FX Rate

	FX Applied	FX Not Applied
ATM Withdrawal	11.72%	88.28%
Transfer - International		100.00%
Total	1.10%	98.90%

- Device type fully determines transaction status and failure reason with no exceptions
[Android→Pending](#), [Web→Reversed](#), [no-device→Declined](#) ("Card Limit Exceeded"), [iOS→Declined](#) ("Insufficient Funds") - while channel itself carries zero signal, splitting an identical 25/25/25/25 across devices every time.
- The FX engine only applies a rate on Android-originated international ATM withdrawals and never on Transfer-International, leaving [98.9%](#) of international value FX-unrated, and three transaction types (Loan Repayment, Standing Order, Transfer-International) sit [95-99%](#) concentrated in Web due to a handful of outsized transactions, while Wednesday is consistently the lowest-value weekday.

Premium	73.33%	100.00%
Total	80.00%	80.00%

- Tenure, segment, and KYC status move almost perfectly together - 7+ year tenure exists only in Business, under-3-year tenure only in Starter, and every segment but Starter is 100% KYC-verified (Starter sits at 20%, with Customer 12 the lone exception) - yet long tenure offers no protection, as two of the longest-standing Business accounts (10 and 14) still show Declined transactions, one explicitly for "Card Limit Exceeded."

- Open an immediate manual review of Customer 20's account. One relationship represents 59% of book value and 95% of fraud exposure — resolving this single case closes the majority of the bank's current fraud risk, faster than any portfolio-wide control change.
- Since 100% of fraud occurs post-verification, prioritize monitoring on transaction size, device type, and region (London/Midlands) rather than KYC status, which currently has zero discriminating power for this risk.
- Fix the device-triggered billing rule causing erroneous charges.

Fraud vs Risk Validation

- Total Fee Charged (£750.17) sits almost exactly on Total Typical Fee (£750.00) — but that's £587.28 in overcharges and £587.28 in shortfalls (£1,174.39 gross) happening to cancel out. The bank isn't "roughly correct"; it's billing the wrong customers in opposite directions by similar amounts.
- Of the £587.11 total shortfall, Transfer-International accounts for £399.61 (68%) — and it's 100% consistent across every transaction of that type, not an occasional miss.

Transaction Type vs Fees Charged

Transaction Type	Above Typical		Below Typical
